

Setting up your PlantBox irrigation

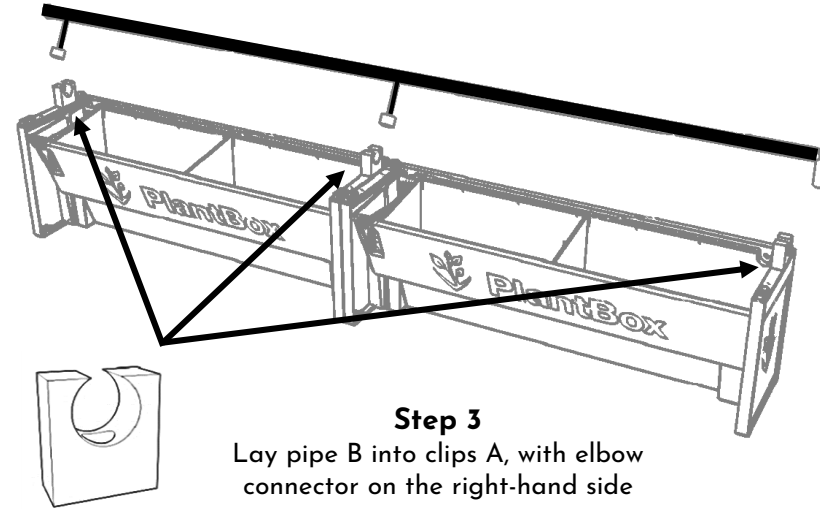

Step 1

Screw clip A into far left end cap

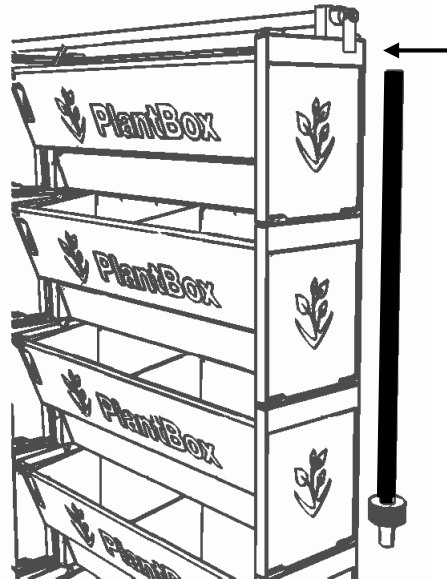

Step 2

Screw a clip into each right hand end cap

Step 3

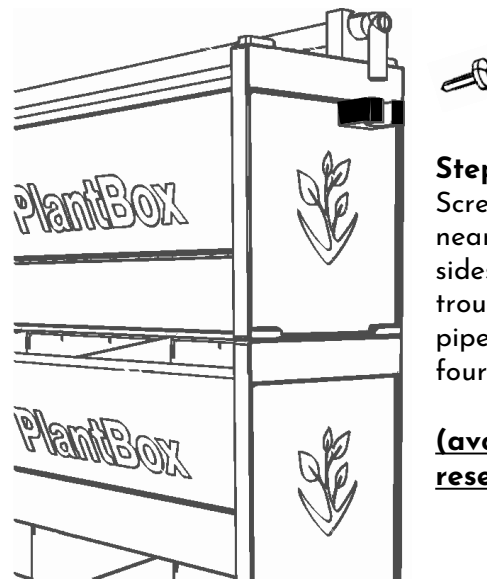

Lay pipe B into clips A, with elbow connector on the right-hand side

Step 4

Cut pipe C to suit* then connect open end of pipe C onto elbow of pipe B

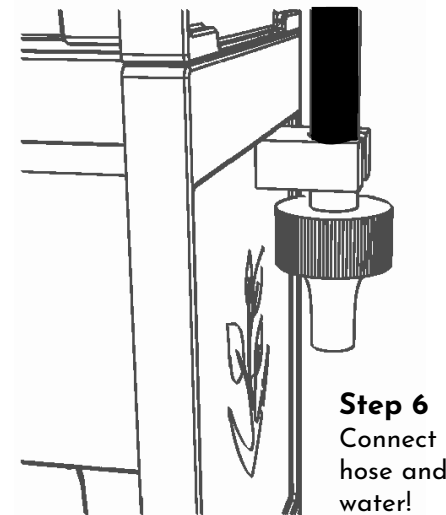

**Recommended for hose connector to be approx. 50cms above the ground*

Step 5

Screw more clips near the top of the sides of the PlantBox troughs to support pipe C at say every four troughs

(avoid the water reservoir ☺)

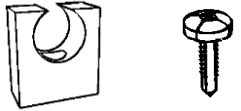

Step 6

Connect hose and water!

What's in the box?
(Part assembly required)

A: Pipe clips and 19mm screws

B: Horizontal pipe (same length as your PlantBoxes), stop end, lace and button drippers, elbow connector

C: 16mm downpipe connected with hose connector

Tools needed: screwdriver

Notes

- make sure to lay each button dripper in the filter of each trough
- Individual dripper flow can be adjusted by turning the drippers
- Water will drain out of the downpipe at the end of watering
